

## Guidance for a Tiered Gathering of Hazard Information for the Risk Assessment of Nanomaterials

28 February 2008

The German Chemical Industry is committed to a responsible production and use of nanomaterials.

To support member companies, and customer companies in the value chain, to manage the health, safety and environmental aspects of nanomaterials throughout the life cycle, the German Chemical Industry Association VCI has issued a series of documents. They provide guidance on all aspects of a good product stewardship on nanomaterials. This includes, i.a., the gathering of physicochemical, toxicological and ecotoxicological information for a proper risk assessment of nanomaterials.

As download document, please find the VCI document: “Guidance for a Tiered Gathering of Hazard Information for the Risk Assessment of Nanomaterials”.
